- 6 pencils*
- 3 blue dice
- 3 green dice
- 3 yellow dice
- 2 black dice
- 1 rulebook

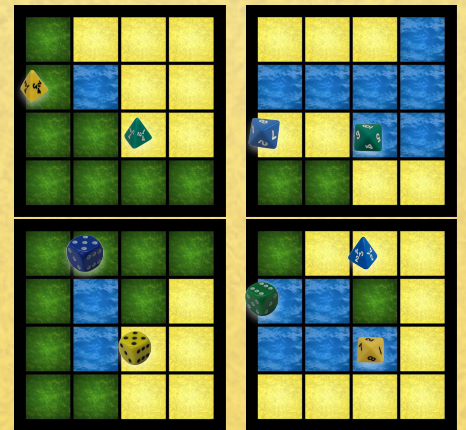

*player count only limited by pencils in the box

Premise

In *BirdSpot*, you are a bird photographer. Position yourself at a corner on the board and capture photographs of birds on your score sheet. Birds vary in color and size with the dice. The score sheet gives camera enhancements as rows and columns are completed, including a bonus when birds are captured in their corresponding habitat. After 4 rows on any player's sheet are filled wins, whoever has the biggest score.

Gameplay

Pick your corner. Roll all the dice. Place the bird dice according to the migration card. Use the total of the camera dice to know what you can see. Cross off your limited enhancements wisely to extend your reach or increase your points.

After everyone has written a number, move the birds according to their value in the direction indicated on the migration card, or reset the board if most of the birds have flown away.
